**PROFESSIONAL TOOLS
AND GARAGE EQUIPMENT**

OFFICIAL PARTNER
OF THE CHAMPIONSHIP

GOLD

world skills
Russia

OMBRA® – tool trade mark used for wide range of operations as the equipment of the **“PROFESSIONAL”** level.

OMBRA® made in one of the leading enterprises in this market sector, has long-term experience and delivers the production all over the world.

OMBRA® tool is manufactured based on high requirements of the modern consumer, according to the DIN, ANSI standards.

The producer guarantees function of the tool all term of operation, declaring **“A LIFETIME WARRANTY”** for the materials and technologies applied by manufacturing of products.

OMBRA® offers the consumer with various level of income really qualitative, smart and, at the same time, an inexpensive product which will serve many years.

OMBRA® tool has a number of advantages that make it noticeable on the background of other brands on the market today.

DISTINCTIVE FEATURES OF OMBRA®:

- **High quality of materials!**
Alloyed steel using for production, providing unique durability of the professional **OMBRA®** tool.
- **Modern production technologies!**
The innovating technology **«Triple Coating»** (**«Triple Coating»** – the threefold chrome–nickel coating with polishing at an intermediate stage) provides to the professional **OMBRA®** tool reliable protection from chemical and mechanical influences.
- **Multistage quality control of production!**
Reliability, durability and safety of the professional **OMBRA®** tool – confirmed with the **LIFETIME WARRANTY**.
- **Ergonomics!**
Thanks to modern materials and engineering decisions, the professional **OMBRA®** tool has very high rates of convenience in application.
- **High quality of finishing!**
The mirror, three–layer chrome–nickel coating provides to **OMBRA®** products not only faultless appearance which brings to the user esthetic comfort, but also facilitates removal of contaminants after work.
- **Bargain price!**
Using rational approach to management of costs, we offer the **OMBRA®** tool at very favorable price.

Long–term experience and faultless reputation of the brand owner, who can has rights of independent expansion of the range and regulation of warehouse stocks, uniform price policy of the company – all these give strong confidence to partners in mutual beneficial cooperation and obtaining substantial profit.

You can use this catalog or our website **www.ombratools.com** to choose necessary **OMBRA®** tools for you.

Our dealers or managers will be glad to discuss your wishes, remarks, questions and terms.

TOOL SETS

The tools included in the **OMBRA®** sets meet the high international quality standards.

The optimal set of sets, ergonomic, bright design of tools and packaging, high quality of materials used in production, will please the most demanding customer.

WRENCHES

OMBRA® wrenches meet the ANSI/ASME B107.6 standard. Lentil section of the handle with the increased thickness of an edge allows to develop higher torque in comparison with keys of double-T section of the European type. The mirror, three-layer, chrome-nickel coating, resistant to mechanical and environmental stress, facilitates removal of contaminants after work.

TORQUE WRENCHES

OMBRA® torque wrenches are produced with observance of all requirements to this type of products, calibrated by the technique answering to conditions of the international DIN ISO 6789 and ASME B107.14M-1994 standards on the modern equipment with permissible error of $\pm 4\%$. Each wrench has the individual manufacturer's certificate guaranteeing the accuracy of the very tool.

SOCKETS

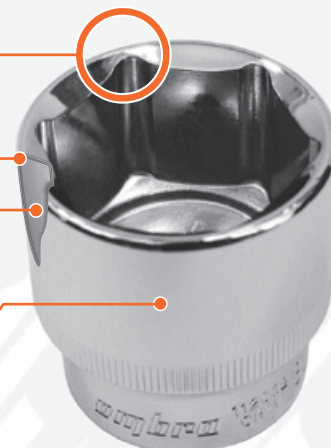

The mirror-polished chrome-nickel coating gives the **OMBRA®** tool an impeccable look and facilitates the removal of contaminants after work. Cutting on the junctions will reliably hold the head in the hands, working with the fasteners with free rotation without using additional drives. **OMBRA®** sockets are made of alloyed chrome-vanadium steel under technology that allows using loads exceeding the maximum permissible for such tools by 30–50%.

HANDLES, UNIVERSAL JOINTS, RATCHETS

Ratchet handles, universal joints, extensions of **OMBRA®** are made of alloyed chrome–vanadium steel under technology that allows using loads exceeding the maximum permission for such tools on 30–50% when using. Mirror chrome–nickel coating gives the instrument an impeccable look and facilitates the removal of contaminants after work.

The ratchet handles **OMBRA®** with star wheel, providing an increased contact area of the ratchet mechanism, guarantee a high safety margin at a high torque, which can be developed thanks to an ergonomic, two–component handle. The quick reset device provides an easy change and reliably locks the rig on the drive.

TOOLS FOR THE INTERNAL PROFILE

OMBRA® screwdrivers are equipped with original composite oil-and-gasoline resistant handles, which ensure a reliable grip of the tool when working, thanks to the correct combination of soft and hard parts. Rods, fixed in the handle with special strength, are made of SVCM steel. The working parts are hardened to high hardness and magnetized.

L-shaped Hex keys with an enlarged long part and a ball provide access to fasteners in a limited working space. They are made of alloyed chrome-vanadium steel by the technology, which allows using high loads in working process.

PLIERS

OMBRA® pliers are equipped with ergonomic, rubber-polymer, two-component handles, resistant to organic solvents and oil products, guaranteeing the protection of hands during operation, which reliably keep the parts to be processed. Induction-hardened work surfaces and a hard-chrome plated connecting element ensure a long tool life due to increased wear resistance.

PNEUMATIC TOOLS

Pneumatic screwdrivers

OMBRA® pneumatic impact wrenches are used in the mechanization of fittings for tightening (screwing) or loosening (unscrewing) of highly loaded and complicated threaded joints with high speed, differentiated torque and low energy and operator costs.

OMP11281

55319

Pneumatic impact wrench

TECHNICAL CHARACTERISTICS	OMP11281
Anvil size (inch)	1/2"
Free speed (RPM)	8000
Maximum torque (Nm)	815
Working torque range (Nm)	68-750
Recommended air pressure (Bar)	6,2
Average air consumption CFM(l/min)	120
Recommended air hose size (mm)	10
Air inlet size (inch)	1/4
Length (mm)	185
Weight (Kg)	2,63
Clutch mechanism	Twin hammer
Exhaust type	Handle exhaust
Noise level dB (A)	83
Vibration level (m/s2)	0,8
Recommended working temperature range (°C)	-20+50

OMP11212

55372

Pneumatic impact wrench

TECHNICAL CHARACTERISTICS	OMP11212
Anvil size (inch)	1/2"
Free speed (RPM)	7000
Maximum torque (Nm)	1200
Working torque range (Nm)	75-960
Recommended air pressure (Bar)	6,2
Average air consumption CFM(l/min)	124,6
Recommended air hose size (mm)	10
Air inlet size (inch)	1/4
Length (mm)	185
Weight (Kg)	2,7
Clutch mechanism	Twin hammer
Exhaust type	Handle exhaust
Noise level dB (A)	80
Vibration level (m/s2)	0,8
Recommended working temperature range (°C)	-20+50

OMP11339

55939

Pneumatic impact wrench

TECHNICAL CHARACTERISTICS	OMP11339
Anvil size (inch)	1
Free speed (RPM)	5000
Maximum torque (Nm)	3390

Accessories of pneumatic tool

A group of tools used for performing assembly work with a mechanized tool while servicing highly loaded or complicated threaded joints. The **OMBRA®** impact socket and accessories are resistant to high dynamic loads, manufactured using a special technology from a special grade of steel, containing in the proper proportion as alloying elements, chromium and molybdenum (CrMo). Products are manufactured in accordance with DIN 3129, have a protective, abrasion-resistant, electrochemical coating, are an excellent addition to the pneumatic tool.

AUTOMOTIVE TOOLS

Special tools for servicing automotive equipment facilitates work, including in difficult-to-reach places, it allows to carry out maintenance independently, without resorting to specialized workshops. Thanks to these adaptations, many types of work, previously of great complexity and time-consuming, have become easier and more accessible.

GARAGE EQUIPMENT

This group of special devices includes products, first of all, used as tools for body, dismantling and modular works on service station and consists of series of lifting and assembly devices, tools for body repair. Hydraulic bottle and the rolling jacks, safety racks serving as the equipment for tire workshops can also add a garage of an auto enthusiast and to become the irreplaceable assistant on a distant trip both for the car, and for the heavy truck.

All products executed in recognizable design of **OMBRA®** are made according to requirements of the international and Russian standards, completely answer the stated characteristics. The hydraulic power **OMBRA®** tools are supplied with the devices preventing a possibility of an overload.

Hydraulic manual pumps

The hydraulic pumps **OMBRA®** are intended for industrial application as a power source and the capacity of working liquid in the hydraulic systems having actuating mechanisms of plunger type and the corresponding power such as jacks, the press, hydrotools, etc.

Hydraulic transmission jack

OHT305M

55518

Pit Jack, 500 kg

OMBRA® hydraulic transmission jack is a mobile lifting device and features a compact design, low weight and large stroke of the rod. The product is used in the manufacture of maintenance of transmission units, installation and dismantling of assemblies and other parts of the vehicle systems installed on the inspection pit, overpass or lift for repair or maintenance. With the **OMBRA®** transmission rack, you can raise, lower and move the assembly mounted on it.

Jacks

OMBRA® hydraulic jacks are portable or mobile mechanisms for lifting of an object, resting on it. These jacks are compact, reliable, simple to design and operate. The use of **OMBRA®** jacks as a lifting device ensures smooth lifting of the load and its precise fixation at a given height with moderate operator effort.

TOOL FURNITURE

Tool trolleys

OMBRA® tool trolleys are used to equip stationary and mobile workplaces in workshops and other premises as storage and moving means within the working area of tools, special equipment, spare parts with a total mass of up to 200 kg, which are necessary to ensure the working process. All elements of the products are covered with shockproof powder glossy enamel, providing reliable protection and giving the product a neat appearance. The system of shelves locking prevents their spontaneous opening when installing the product on an uneven surface, and the lock of increased reliability ensures the protection of the contents from unauthorized access.

WARRANTY

OMBRA TM tools belong to **PROFESSIONAL** products.

They are used for an assembly, repair and maintenance of engineering products by personnel with appropriate qualifications, aware of safety instructions, operating conditions and work skills.

OMBRA TM products have so called **"LIFETIME WARRANTY"**. That means an unlimited period of maintenance of warranty obligations the entire period of operation, namely, the replacement of a failed tool in the case of the manufacturer using poor-quality materials or violation of technology in the process of its production. In other words: it is necessary to replace a tool that has a defect, detected or arisen as a result of violations during its manufacture and making it impossible to continue using the tool.

Non-warranty cases:

- Damage due to abuse
- Damage due to use for other than purpose specified
- Violations of the rules of storage and use
- Natural wear and tear

In this regard, the manufacturer strongly recommends:

- 1) Do not use a nozzle for the manual drive with the mechanized tool
- 2) Do not use a nozzle for the mechanized tool with the manual drive.
- 3) Do not step up the drive lever or key.
- 4) Do not hit on a key or a drive by other subjects.
- 5) Do not allow falling of the tool from height to a hard surface.
- 6) Do not allow long storage of the tool in the conditions of high humidity or other hostile environment.
- 7) Do not allow independent repair and adjustments of the tool in the warranty period.
- 8) After using clean the instrument of contamination.
- 9) Select and use the tool strictly for its intended purpose.

Insert bits are consumables. Warranty on them does not apply, as well as on the end caps (heads with inserts, integral and integral) impact and for manual drive, intended for maintenance of fasteners with an internal working profile.

Flexible extensions and extensions with a ball incapable, due to their design, to transmit a large torque, are also not subject to maintenance under warranty conditions.

Tools for cutting, impact-cutting, screwdrivers and pliers in case of deterioration of the working surfaces are not subject to exchange under the guarantee.

The instrument, which has a kinematic scheme in its design, covers the concept of **"limited warranty"** due to the shortened service life associated with increased wear during use. The term "limited warranty" is defined in **12 months** from the beginning of use under medium operating conditions, with the exception of torque wrenches, the accuracy of which depends on the intensity of operation.

Torque wrenches are subject to obligatory calibration on fulfillment of 1000 cycles. With increased intensity or severe operating conditions, the warranty period can be shortened. The beginning of operation is determined by the date of sale indicated in the **OMBRA TM** warranty card by the seller of the instrument or document confirming the purchase of the product. If there is no possibility to determine the date of the beginning of the operation of the product, the start of operation is determined by the serial number, proceeding from the information received from the manufacturer. Maintenance under the warranty conditions of the manufacturer is not provided in case it is impossible to identify the provided serial numbers of the products and documents confirming the acquisition and the beginning of operation of the products covered by the warranty conditions for tools with a limited warranty period.

Claims under this warranty are also not accepted in cases where it is impossible to confirm the user's qualification, signs of repair work performed by unauthorized persons, design changes, or self-installation of non-original components and parts of products.

The manufacturer reserves the right to determine the cause of the failure of the product (due to poor quality material, human factors or for other reasons).

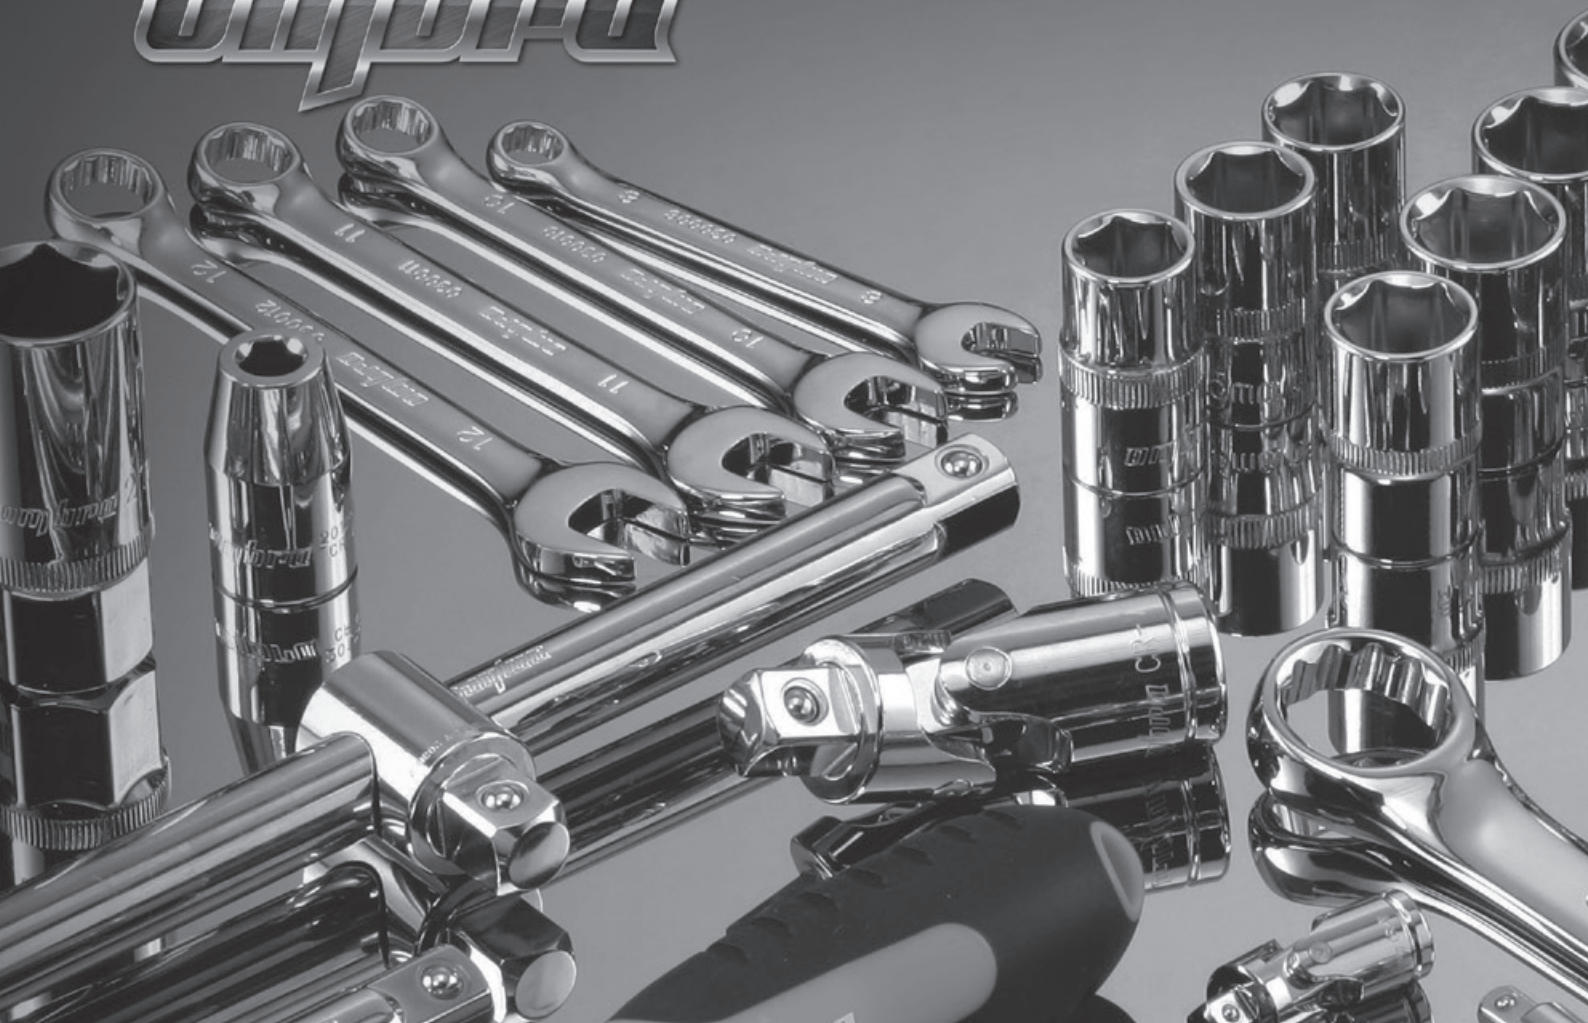

The rights under this warranty are limited to the original consumer and do not apply to subsequent ones.

In case of a malfunction, you can contact the service center **OMBRA TM**:
